March 1st, 2025

Dear Water Consumer,

The Water Division is pleased to provide the 2024 Annual Summary Report for the City of Stratford Drinking Water System.

The attached report is in accordance with Schedule 22 of O. Reg 170/03, under the Safe Drinking Water Act.

As identified under Section 12 of O. Reg. 170/03, it is required that the Annual Report as per Section 11 of O. Reg. 170/03 and the Summary Report be made available for inspection by any member of the public during normal business hours, without charge. This report can be viewed at Infrastructure and Developmental Services, City Annex, 82 Erie Street, 3rd Floor, Stratford.

The report can also be found on the City of Stratford website at: https://www.stratford.ca/en/live-here/waterannualreports.aspx

This report will also be provided to members of council by March 31, 2025.

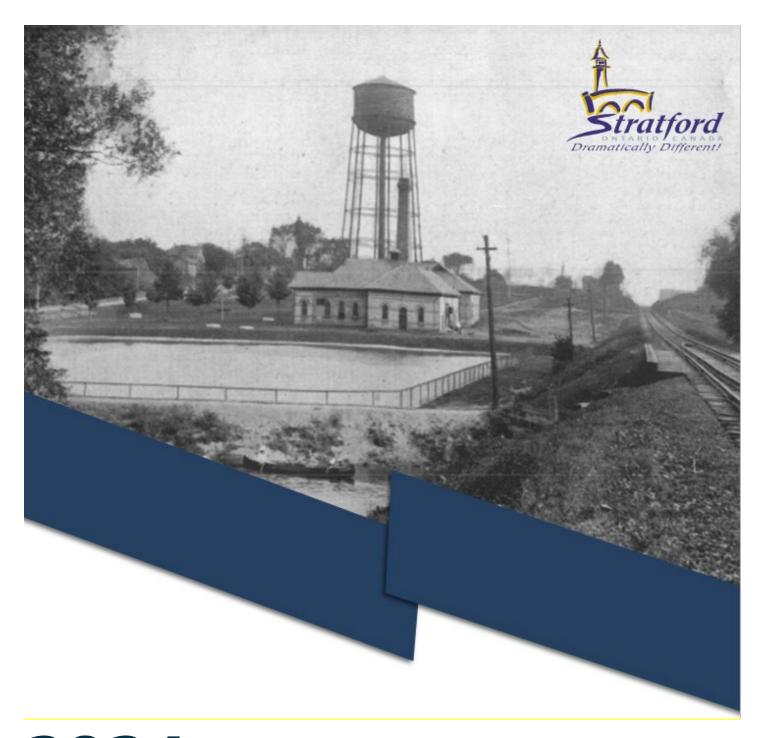

For any questions or additional information regarding the report, please contact me at (519) 271-0250 ext. 222.

Yours truly,

Sean Beech

Manager of Environmental Services

Quality Management System Policy

The City of Stratford as the owner and operator of the treatment and distribution drinking water system is committed to developing a high level of trust, commitment, and accountability by consistently delivering high quality and safe drinking water to the consumers.

The City of Stratford, Water Division is committed to:

- Providing safe and reliable drinking water services to our consumers, by managing potential risks, promoting resource stewardship and source water protection,
- Complying with applicable legislation, regulations, guidelines, and standards as related to the provision of safe drinking water.
- Maintaining and continually improving the effectiveness of the Quality Management System; and
- Establish and maintain a Quality Management System that is consistent with the Quality Management System Policy.

The City of Stratford Quality Management System Summary

The City of Stratford Quality Management System (QMS) is legislated under the Drinking Water Quality Management Standard (DWQMS) through the Safe Drinking Water Act. To maintain operating authority accreditation, the Ministry of the Environment, Conservation and Parks (MECP) mandate tasks that must be completed annually. These activities include:

- Conducting an internal audit of the Quality Management System.
- Conducting a Management Review meeting.
- Participating in an external audit conducting by a third-party Accreditation Body.
- Updating the Quality Management System Operational Plan.
- Updating Council of the status of the Quality Management System.

Internal audits were completed with support from Water operational staff and Acclaims Environmental. No non-conformities were identified as a result of the internal audit. The audit report did note five areas for opportunities for improvement which are all being addressed by staff.

The City of Stratford must receive accreditation annually to operate the drinking water system. Through a qualified third-party auditor, the City must demonstrate that its QMS meets the requirements of the DWQMS (Drinking Water Quality Management Standard). SAI Global conducted an external surveillance audit on April 11th, 2024, by Janet McKenzie. There were no non-conformances and one OFI identified.

Staff are required to conduct an annual Management Review meeting to evaluate the effectiveness of the QMS. Deficiencies and opportunities for improvement are identified and action items are developed to ensure follow-up. The City of Stratford held their management review meeting on December 19th, 2024. All requirements were met in 2024.

1.0 System Overview

This annual summary for the City of Stratford Drinking Water System was published in accordance with Schedule 22 of Ontario's Drinking Water Systems Regulation for the reporting period of January 1, 2024, to December 31, 2024. The City of Stratford Drinking Water System (waterworks number 220000530) is categorized as a Large Municipal Residential Drinking Water System.

This report was prepared by the City of Stratford on behalf of the Corporation of the City of Stratford and must be supplied to the municipal council by March 31, 2024.

2.0 Compliance with Regulations

The City of Stratford Drinking Water System is operated and maintained to ensure that safe drinking water supplied to the consumers and serviced by the system satisfy requirements within the Safe Drinking Water Act, the regulations, the Municipal Drinking Water License (074-101) and Drinking Water Works Permit (074-201).

The Ministry of the Environment, Conservation and Parks (MECP) conducted the routine annual inspection on May 22nd, 2024. The inspecting officer, Neville Rising, identified three non-compliances with the regulatory requirements. Two of them were administrative in nature, and the third involved modifications to our well supply infrastructure. All were corrected immediately following the inspection. Updates were sent to Mr. Rising during this process to show our progress on the corrective actions.

There was one Adverse Drinking Water Quality Incident (AWQI) reported during this reporting period. It occurred with a distribution sample taken on December 19, 2024, at 882 Ontario St. Two total coliforms were identified during sampling with a result of 2 cfu/100mL. This was reported to SACC and the MECP as required. Resamples were taken at the source and the upstream and downstream on December 20, 2024. All resamples passed.

Water quality exceedances for Fluoride and Sodium were observed in samples taken in 2024. The Fluoride and Sodium levels continue to be an issue in the system due to them occurring naturally. Annual notification is provided to property owners on their water bill as well as notification on the Huron Perth Public Health website of the Fluoride levels.

Fluoride & Sodium exceedances are reportable every 57 months. Next reportable exceedances will be in 2027 and 2028.

- Next reporting requirement for Fluoride, for all treated entry locations, is March 8, 2028.
- Next reporting requirement for Sodium, for all treated entry locations, is December 8, 2027.

3.0 Corrective Actions

The routine MECP Inspections have an Inspection Rating Record, which evaluates the system to provide information for the owner/operator on areas that need to be improved. The particular areas that were evaluated for the City of Stratford Drinking Water System were: Treatment Process, Operations Manuals, Water Quality Monitoring, Reporting and Corrective Actions and Other Inspection Findings. This system received 43 out of 497 non-compliance risk ratings and as such received 91.35% for the Final Inspection Rating.

4.0 **Summary of Quantity of Water Supplied**

Production Wells and Treated Flows

Within the City of Stratford Drinking Water System is a total of 11 confined artesian wells. Of the 11 wells in the system, five are considered remote facilities that are located throughout the city. The distribution system has over 180 kilometers of cast iron, ductile, steel and PVC water main, varying in size from 100mm to 400mm. Additionally, The City of Stratford's water system is 100% metered, with more than 12,537 service connections.

There are also two water towers within the distribution system that provide both storage and pressure stability. The City's topography is moderately level which allows for a single pressure zone throughout the distribution system.

Attached as Appendix A is a summary the flow rates for 2024, which include Municipal Drinking Water License Schedule C rated capacity, total and average daily flows, and raw water peak flows.

Monitoring Wells

As per section 4.2 (4) of the Permit to Take Water, all data collected under the monitoring well program shall be analyzed, interpreted, and summarized in an annual report by a qualified person. The 2024 final report was prepared by ARL Groundwater Resources Ltd. on February 25th, 2025. Reports can be viewed at 82 Erie Street, 3rd Floor Engineering.

General comments include:

- Total pumpage from all wells was approximately 17% lower in 2024 compared with 2023.
- The Romeo Street well field accounted for approximately 55% of the total well production in 2024, followed by O'Loane (14%), Chestnut and Dunn (both at 11%), and Lorne Avenue and Mornington St. (both at 4%), respectively.

- The hydrographs of water level measurements recorded at the city multilevel monitoring wells in 2024 are generally consistent with measurements recorded in recent years.
- There is evidence that water levels have a general decline.
- There is no evidence available to indicate that water taking by the city in 2024 had an adverse effect on other private wells or the natural environment.

Recommendations:

- That water level monitoring at the multilevel monitoring wells continues with some changes in methodology including a shift to more automated monitoring using dataloggers and transducers.
- That a more comprehensive review and interpretation of the monitoring data be performed in 2025, to update and improve on the effectiveness of the monitoring program in understanding how the aquifer system responds to pumping.

<u>Appendix "A" – Flow Data</u>

Chestnut Street Well and Pumphouse

| Month | Month Raw Peak Flow Treate | | Monthly Average | |
|-----------|----------------------------|---------------------------|------------------------|--|
| | Rate | (MDWL Limit = | (m³/day) | |
| | (Max = 2500 L/min) | 3600 m ³ /day) | | |
